Supercon 1005

Turning the System On

- If the displays are not powered on, press the [POWER] button on the right side of the display.

Note: If power LED is flashing, display is ON. If power LED is solid, display needs to be powered ON.

Using the Resident PC

- Wake the computer by moving the mouse. If computer does not respond, press the power button on the computer to turn it ON.
- If PC is not already displaying, press the [SOURCE] button on the displays and select [].

Note: Resident PC output displays on both left and right displays. Right display is set to Extend mode.

Using a Laptop with TV

- Connect your laptop to the end of the VGA cable not connected to the right display.
- Press the [SOURCE] button on the right display and select [].
- After done using, press the [SOURCE] button on the right display and select [] to set display to PC output.

Note: Depending on your laptop model, you may need an adapter. Adapters can be borrowed on short term loan (4hrs.) from an Engineering IT Help Desk.

Note: Only the left display will mirror laptop output. Right display will only show Resident PC content.

Turning the System Off

- Both computer and displays will go to sleep automatically. There is no action required.
